

# SjurSound

pronounced "sure sound"

## SjurSound clip/T

### Description:

A simple and straight forward clipping effect. With its selection of four different clipping types from soft to hard, clip/T has the flexibility to give you just the right sound. With just a little drive, clip/T will provide the subtle distortion of analog tape saturation. A little more drive and it sounds like a vintage tube amp straining to push the notes out. Crank up the drive all the way and you have a heavy pre-amp distortion sound. And combined with other plugins like graphic or parametric equalizers, the possibilities are limitless with clip/T.

### Controls:

**Drive:** controls the pre-clipping gain. Increase to get more distortion, decrease for less distortion.

**Type:** selects the type of clipping. Choose between Soft, Medium-soft, Medium-Hard, and Hard. The harder the clipping type, the more bite the sound will have.

**Volume:** controls the post-clipping gain (volume).
