

SjurSound

pronounced "sure sound"

SjurSound color/7

Description:

Creates the sonic characteristics of popular guitar and bass speakers. Whether it's a vintage Jensen, a legendary Eminence, a rockin' Celestion, or even a historical JBL, the loudspeaker adds the right sonic color to make electric guitar and bass instruments sound great. These sounds were the inspiration for color/7. Recording direct can leave a thin and sterile sound. Something is missing. With its efficient loudspeaker simulation algorithm, color/7 provides that realistic electric guitar sound without hogging processor resources. Bring that great guitar sound back with color/7.

Controls:

Loudspeaker: selects the type of loudspeaker simulation. Choose between five different speakers -

- Guitar: warm
- Guitar: bright
- Guitar: full
- Bass: warm
- Bass: bright

Volume: provides fine-level control of the output level.
